

jBoss Business Process Management Suite

A bridge from Conventional Web Development to Business Development

Background Information

- Business Process Development is a term coined to the automation of business processes
- Example: Auto-account monitoring systems or any other processes that require human interactions along with system services
- Business Process Automation is widely used in banks through-out North America

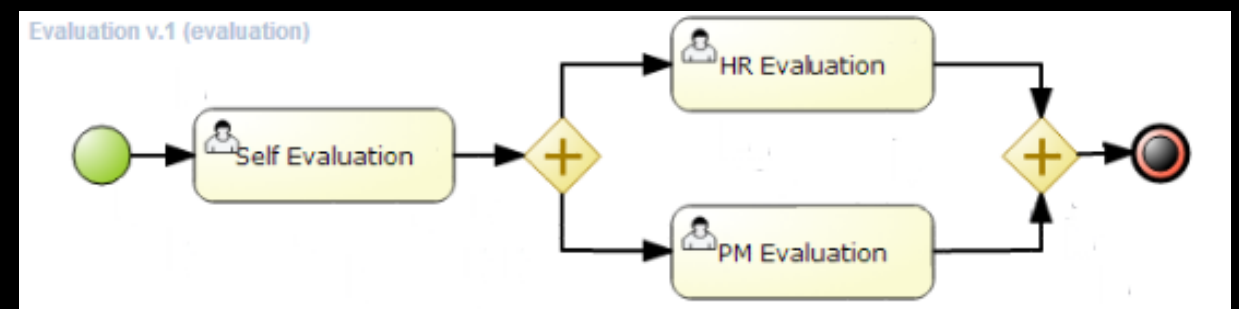

Purpose of this Presentation

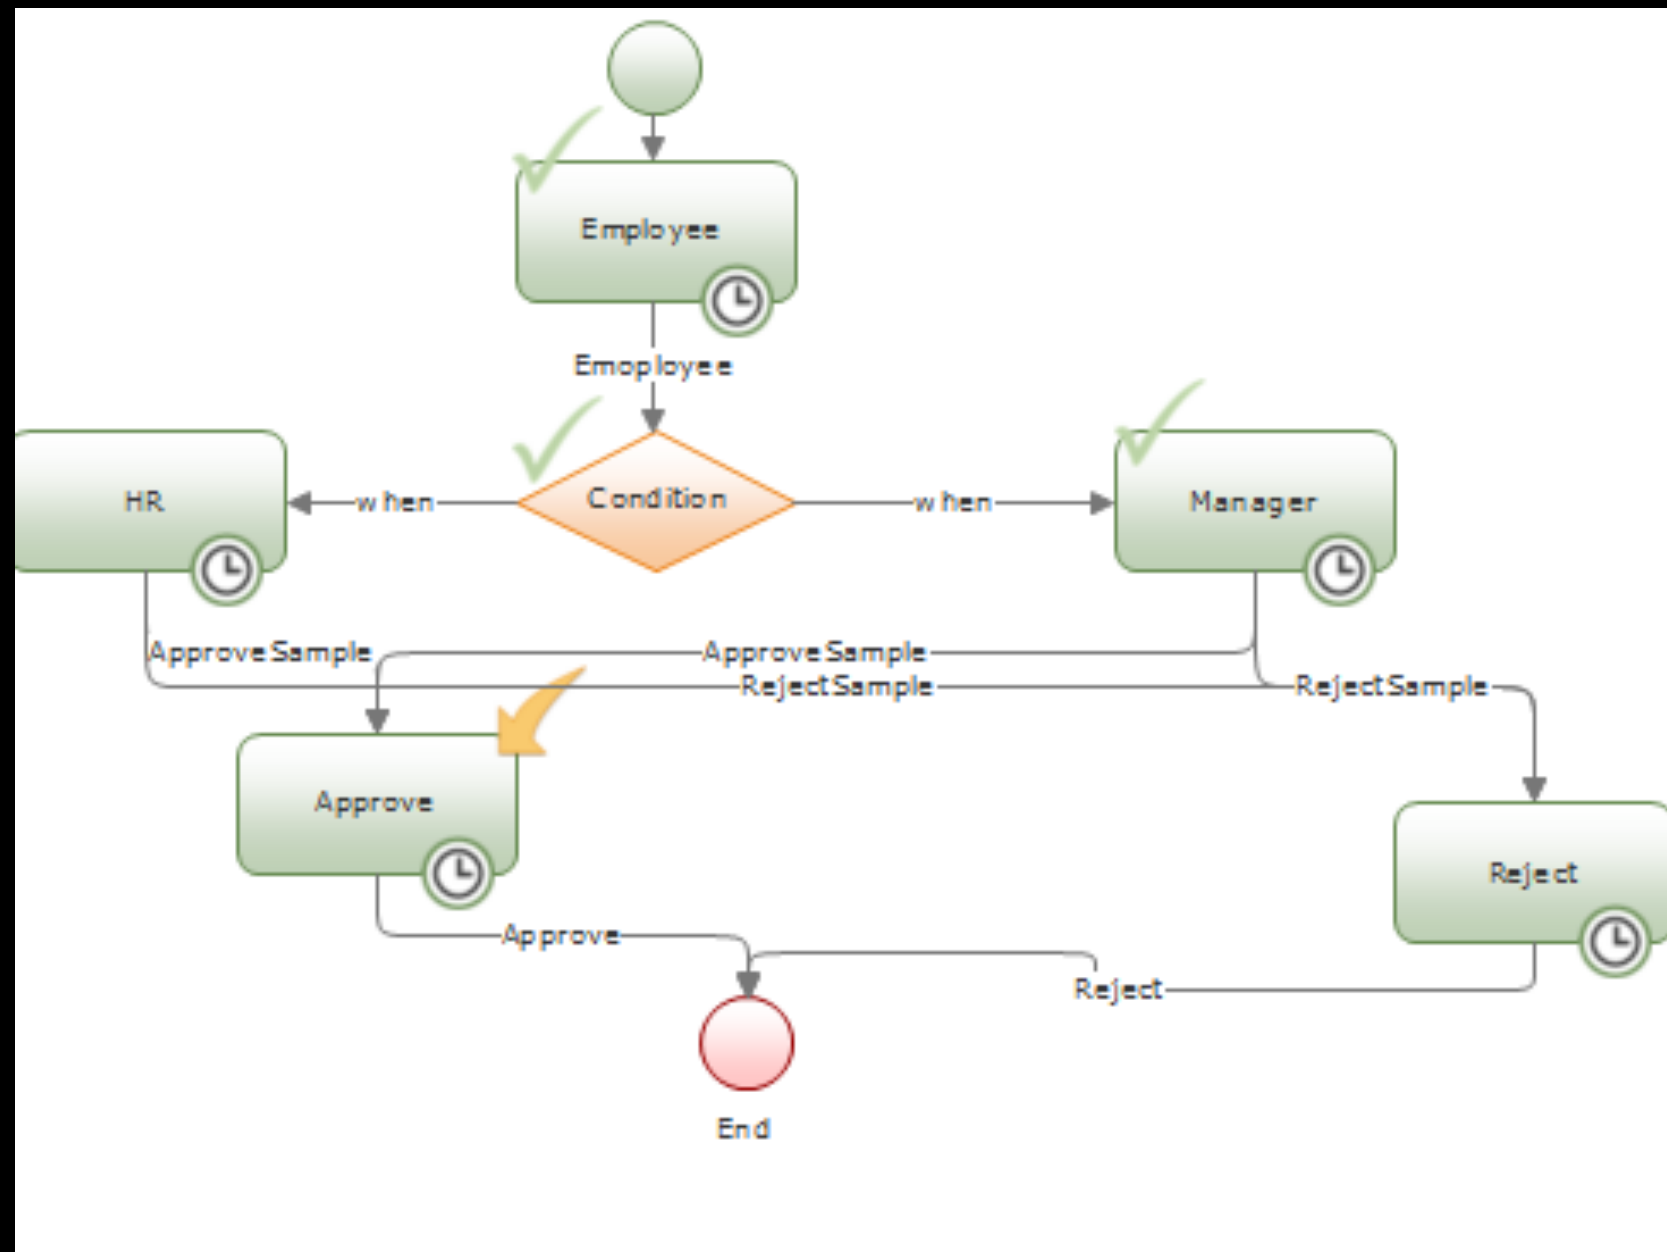

- Present my findings about BPM development
- Conventional Web-Dev vs. Business Web-Dev
- Demonstrate some of the applications of the findings

Conventional Web Applications

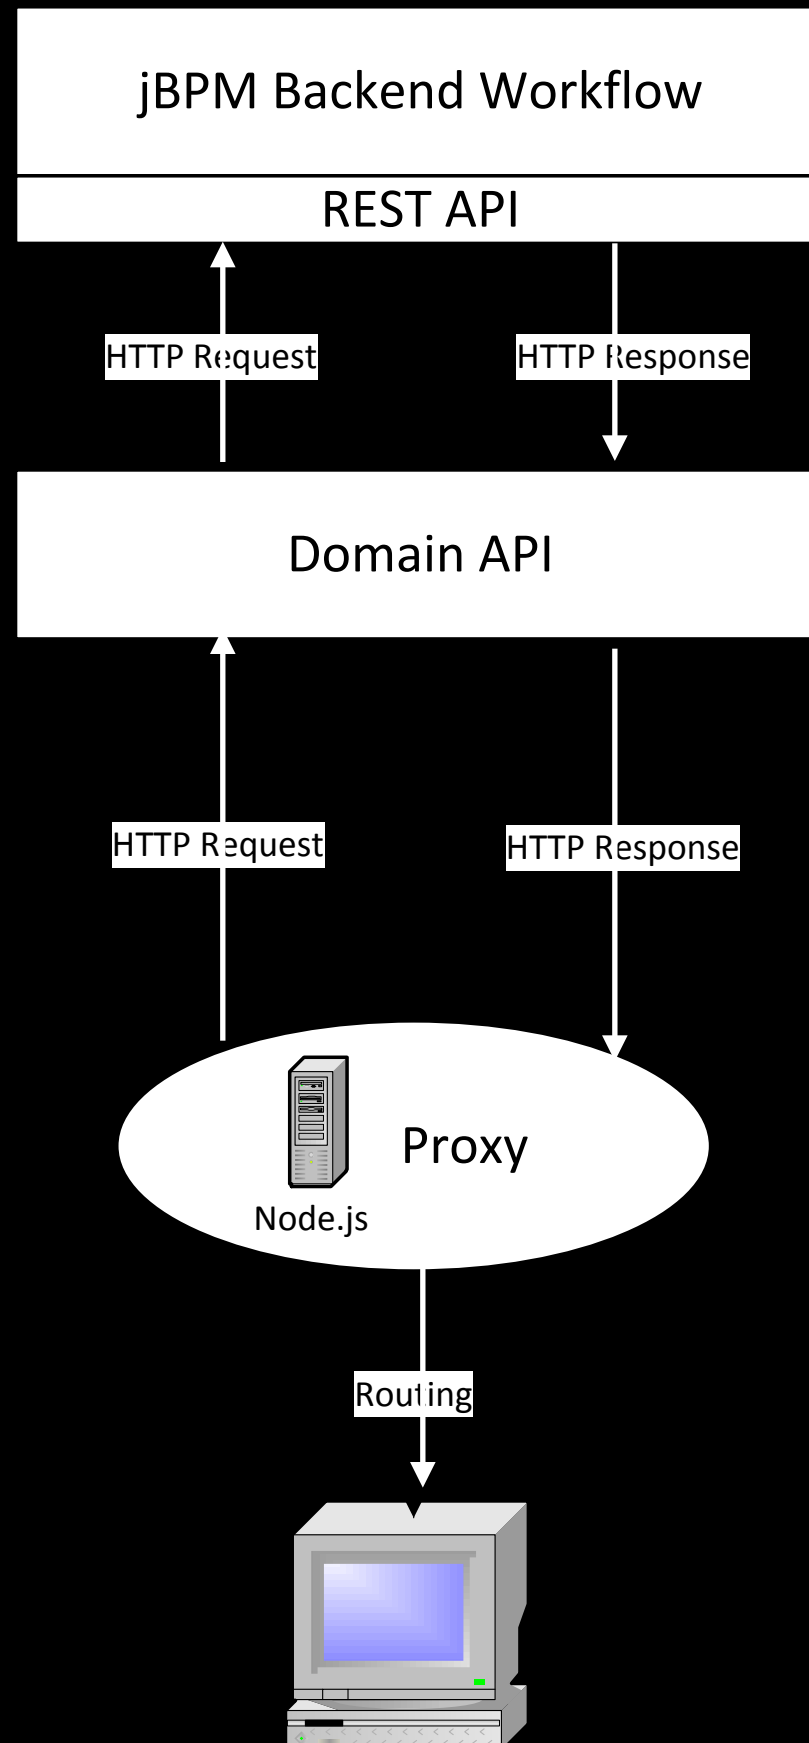

How can large business organizations catch up with recent technologies?

- By combining conventional web development with business process management
- Recent BPM technology: jBPM
- Recent web development technology: AngularJS, Node.js, MongoDB, etc.

How?

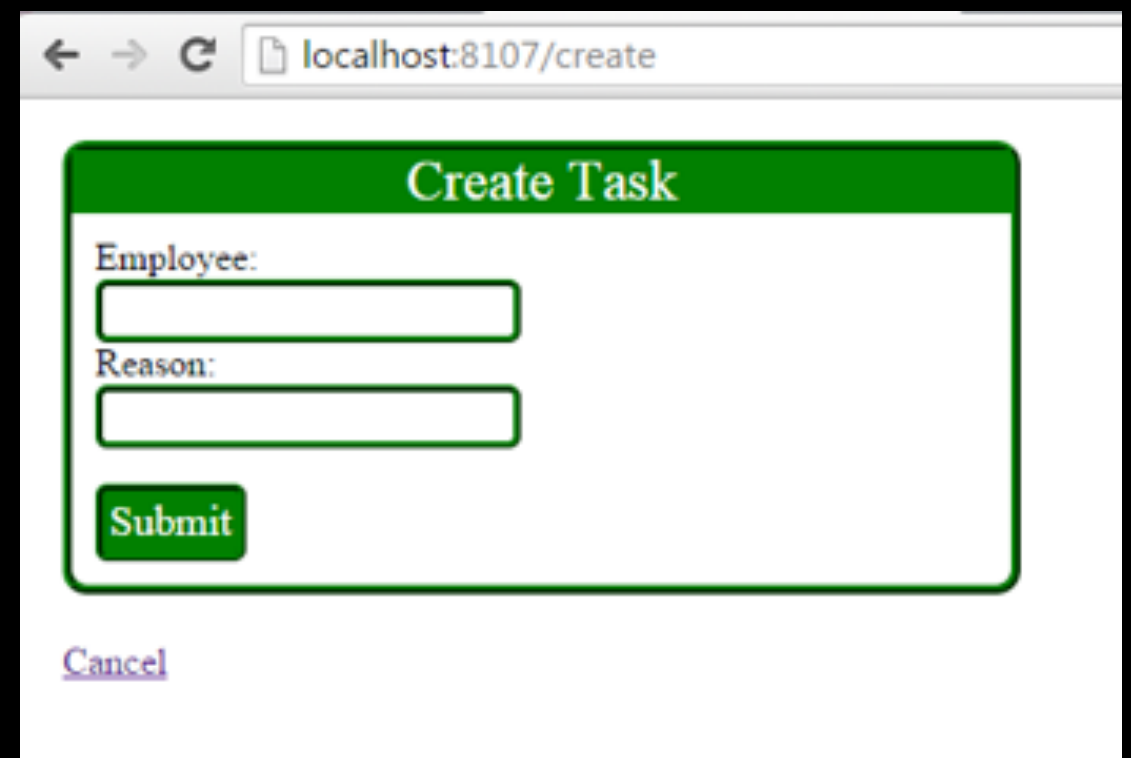

- Lets imagine Web Applications with backends that represent something much more than a data store (data base, data processing) - Workflows

Connection Between the UI and the Backend

- Pressing submit
- API Communication
- Backend Workflow

A screenshot of a web browser window displaying a form titled "Create Task". The browser's address bar shows "localhost:8107/create". The form has a green header bar with the title "Create Task". Below the header, there are two input fields: "Employee:" and "Reason:". Each input field is a simple text box with a green border. Below the "Reason:" field is a green "Submit" button. At the bottom left of the form, there is a purple "Cancel" link.

Task List

- Task 1 - santa2 (Status: InProgress) Start
- Task 2 - santa2 (Status: InProgress) Start
- Please perform a self-evalutation. - santa2 (Status: InProgress) Start
- Please perform a self-evalutation. - santa2 (Status: InProgress) Start
- Please perform a self-evalutation. - santa2 (Status: Reserved) Start
- Employee Eval - santa2 (Status: InProgress) Start
- Please perform a self-evalutation. - santa2 (Status: Reserved) Start
- Please perform a self-evalutation. - santa2 (Status: InProgress) Start
- Please perform a self-evalutation. - santa2 (Status: InProgress) Start
- Please perform a self-evalutation. - santa2 (Status: InProgress) Start

Logout

Routes

```
app.get('/create', function (req, res) {  
  if (req.session.taskList) {  
    res.render('create_task');  
  } else {  
    res.redirect('/login');  
  }  
});
```

http:<host>:<port>/<path>

Controlling the Workflow

```
exports.createTask = function (req, res) {  
  // Authenticate username and password from the session store  
  username = req.session.username;  
  password = req.session.password;  
  // Get the employee name and reason variables from the request view  
  var employeeName = req.body.employee;  
  var reqReason = req.body.reason;  
  // Declare post parameters for POST request  
  var postData = qstring.stringify({  
    'map_reason': reqReason,  
    'map_employee': employeeName  
  });  
  // API Path  
  options.path = '/jbpm-console/rest/runtime/org.jbpm:Evaluation:1.0/withvars/process/evaluation/start';  
  options.method = 'POST';  
  options.headers = {  
    // Basic HTTP Authentication to access the REST API  
    'Authorization': 'Basic ' + new Buffer(username + ':' + password).toString('base64'),  
    'Content-Type': 'application/x-www-form-urlencoded',  
    'Content-Length': postData.length,  
    'Accept': 'application/json'  
  };  
  // Create request  
  var request = http.request(options, function (response) {  
    response.setEncoding('utf8');  
    if (response.statusCode == 200) {  
      res.redirect('/');  
    }  
  });  
  request.write(postData);  
  request.end();  
}
```

Crunching Some Numbers

	Pega	jBPM + OCA
\$/request	1.80	0
licensing cost / month (\$/month)	380,000	0
Environment Cost (\$)	Un-disclosed	75,000
Total Cost of Ownership (\$)	4.56 M	75,000

Thank-You!

Questions?

Better software can be reusable, it has first to be usable.
